Luke Twomey is currently working as a consultant with ServerX, LLC as a developer focused on Augmented Reality applications and online services. While working with Luke, we have been impressed with his ability to learn and implement successful development patterns across various toolsets. While working at ServerX he has delivered the following capabilities:

- Augmented Reality App Development. Participated in the development of the Augmented Viewer, a mixed reality app that renders 3d assets in an augmented reality user interface. The app is currently available on Android, iOS, and HoloLens. Luke has been responsible for delivering capabilities within that app and the backend cloud services tier.
- Cloud services CRM data migration. Leveraged Python and Odoo APIs to migrate customer data to the Kitchen and Bath Services (KABS) platform to increase customer utilization of the platform.
- WordPress web consultant. Luke assists the development and management of the Association of Multicultural Affairs in Transplantation (AMAT) https://amat1.org. Setting up WordPress plugins and working with AMAT personnel to keep the site up to date.

Luke has been able to take on multiple roles including customer management and development team lead responsibilities continually demonstrating the ability to cover new responsibilities while delivering on his existing commitments. His ability to learn new skills and quickly put them to use will make him an asset to any company that employs him.
